## “HOOK”-----Goes with Pesticides!

What is a Pesticide?

CL #16

U.S. EPA Office of Pesticide Programs 14feb97 (verified 19feb2006)

### EPA Definition

A pesticide is any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest. Pests can be insects, mice and other animals, unwanted plants (weeds), fungi, or microorganisms like bacteria and viruses. Though often *misunderstood* to refer only to **insecticides**, **the term pesticide also applies to herbicides, fungicides**, and various other substances used to control pests. Under United States law, a pesticide is also any substance or mixture of substances intended for use as a plant regulator, defoliant, or desiccant.

It is amazing how we humans get stuck in a rut. We ‘get in the habit’ of doing something and don’t consider any other way. Our point is growers in different areas think of **Hook** in a specific way. If they are using it with herbicides such as Glyphosate ...then **Hook** is always used with ‘herbicides’. In other areas growers only use **Hook** with insecticides and so forth. It seems to relate to how the grower was introduced to **Hook** based on their problem at the time.

**Hook** isn’t just for herbicides. **Hook** has always worked with all pesticides. So whether it is Insecticide, Fungicide, Herbicide, Defoliant, Desiccant, et al...**Hook** goes with everything. So if you haven’t ...Got **Hook**? Get **Hook**!

” **Mic-Ro-Pac**” is here! This month we would like to announce that “**Mic-Ro-Pac**” is now available in many new areas. We have enclosed our new brochure which shows how it will help you. One of the benefits of using **Mic-Ro-Pac** is simply using it in your tank mix. The sequence of “Add **Mic-Ro-Pac** First”...then add your pesticide, then “Add **Hook** Last” means there is no need for another trip across the field. More than ever, every trip across your fields has really got to pay for itself! And folks...”**HOOK**” will more than pay for itself.
